

Tough Panel™

Unique Features

On-Line Edit

For more than a decade on-line programming with PLC's has been a necessity in the programming, startup, and maintenance of PLC applications. The concept of writing a program completely, downloading it, and redoing this process as modifications are discovered is unacceptable. Why should it be acceptable with the touch panel programming? It is important that changes can be made on-line in that different colors or animations can only be fine-tuned while the application is running. It is much easier to troubleshoot system logic by adding objects while the application is still running. All our touchpanels offer complete on-line programming, as they had from the earliest units.

On-Line Edit allows changes in screen design without shutting down the machine. You can also add new objects or simply create a new screen just for troubleshooting logic

You know the power of On-Line programming if you deal with machine/process start-up

1 Connect Computer to Panel

2 Create a temporary Troubleshoot Screen in "Edit On-Line" Mode

3 Troubleshoot without ever having to shut down the machine
